Title: CyberTech Solutions: 2025 Annual Security and Infrastructure Review

Date: March 2025

Prepared by: CyberTech Security Team

Executive Summary

CyberTech Solutions has completed a thorough review of its infrastructure, security protocols, and operational systems for the year 2025. This report covers the performance of the existing IT infrastructure, outlines current security vulnerabilities, and provides recommendations for the upcoming fiscal year.

Key Findings

- Infrastructure Overview:** CyberTech's internal network has grown by 25% over the last year. The company's data centers in Manila, Cebu, and Davao have seen an increase in uptime and performance metrics, with an average uptime of 99.9%. However, several legacy systems were found to be outdated and vulnerable to various cyber threats.
- Security Vulnerabilities:**
 - Outdated Software:** Multiple instances of unsupported software running on critical systems.
 - Weak Access Controls:** Several departments still use shared passwords for key databases.
 - Phishing Risk:** High susceptibility to phishing attacks due to inadequate user training.
- Network Performance:** The company's internal network showed high performance metrics for both speed and reliability, but packet loss was detected in remote office locations.

4. **Compliance and Legal Issues:** All internal systems have been evaluated for compliance with GDPR and other privacy laws. While most systems comply, a few compliance gaps need immediate attention before the next audit.
-

Recommendations for 2026

1. **System Upgrades:**
Immediate replacement of outdated software and systems. Upgrade all critical servers to the latest version of their respective operating systems to reduce exposure to cyberattacks.
 2. **Enhanced Security Measures:**
Implement multi-factor authentication across all systems and eliminate shared passwords. Conduct regular cybersecurity awareness training for all employees.
 3. **Improved Network Monitoring:**
Deploy additional monitoring tools at remote offices to ensure no performance degradation.
 4. **Compliance Gaps:**
Address any compliance issues, particularly in data encryption and privacy protocols, to meet the new regulations set to take effect in 2026.
-

Conclusion

CyberTech Solutions has shown remarkable improvement in network and system performance over the last year. However, several key areas still need improvement to ensure the organization remains resilient in the face of evolving cyber threats. The recommended actions in this report should be prioritized to guarantee the company's long-term security and compliance.
